

## DATA CENTRE AUDITS, MOVES & CHANGES

The challenge for some organisations is overwhelming, therefore we guide the process so you have little disruption. With our proven experience and accreditations, we walk you through the next steps supporting, mapping and planning from the very first meeting.

Here at AJC, we have helped several clients plan and execute such moves from; business case creation to supporting financial justification, through to the creation of an end-to-end migration factory. Combining all the above, AJC Consulting offers:

### Discovery and Audit –

Working with clients to understand their current infrastructure and the available options in terms of how the data moves, creating a platform for mapping and planning the execution.

### Migration Planning & Execution –

Working with the data collected from the audit and discovery phase we help clients create a migration plan to include time frames, resources, costs, governance and reporting. Our skilled teams then help deliver projects through stakeholder engagement executing against the agreed plan.

### Dependency Mapping –

As part of the discovery we work with clients to ensure the services are mapped to the correct underlying infrastructure, leading to the creation of logical and physical move groups.

### Data Centre Exit –

Managing the processes, people and logistics to ensure that relevant expired assets are appropriately retired, certificated and reported including the secure shredding of media and asset recycling.
