

IT RECYCLING AND BROKERAGE

Unwanted electrical and electronic components is the fastest growing waste stream in the UK. Together with our partners, we have overseen in excess of three million devices through the IT lifecycle. This knowledge coupled with our first class facilities ensure our customers receive the best possible service and solutions in the market place today. As an experienced IT recycling supplier within all sectors, AJC's services are perfectly placed to provide its customer's guidance through this complex market. We provide the entire lifecycle management service through four very easy steps:

PC Disposal –

AJC send a detailed report with data erasure certificates for each device processed, ensuring all desktop assets are tracked and disposed of in a compliant and auditable manner.

Hard Drive Destruction (Onsite and Certificated) –

Security Cleared (SC) engineers attend your site in our purpose built shredding trucks. They collect the devices placing them in secure containers prior to being shredded to 11 or even 6mm (MOD level) with certification.

PC Recycling –

Equipment is returned to our operation for data wiping and assessment for any potential residual value to be passed back to the client through its resale.

Asset Brokerage and Realisation –

Depending on the clients requirements, AJC will sell or dispose of any unwanted assets. If agreed, any resale realisation can then be agreed and used to offset future disposal services or even future hardware purchases.
